**Batch – 1C07**

## Project name: Provider Drop

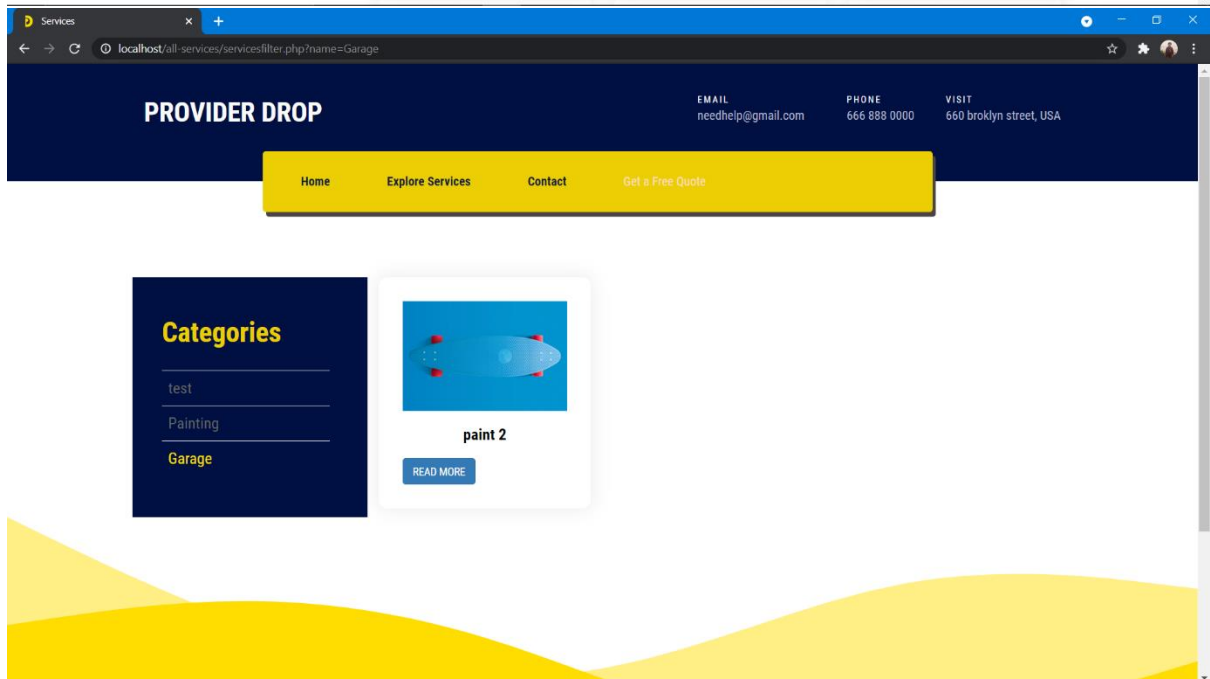

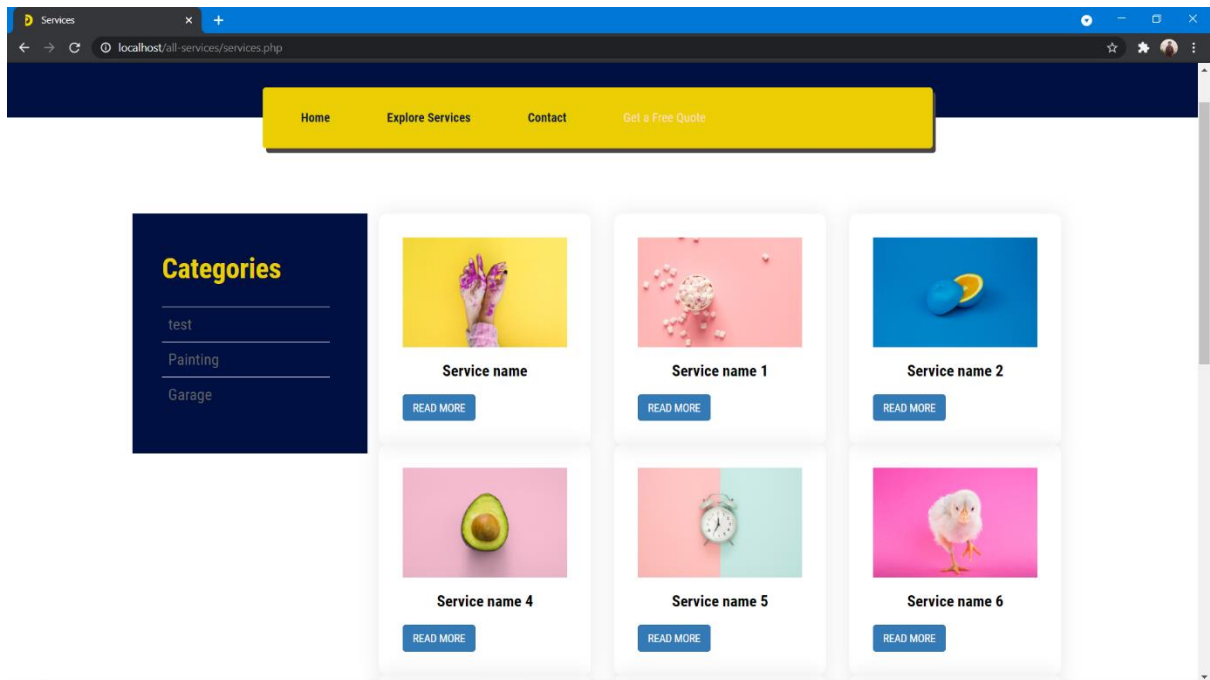

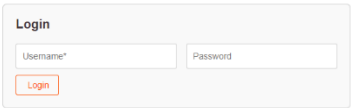

This is a home page of my project. Project is based on Indiamart website where any person who want to sell something can create account and give details about his/her item. If admin found item is ok for selling he/she manually add that specific item in database.

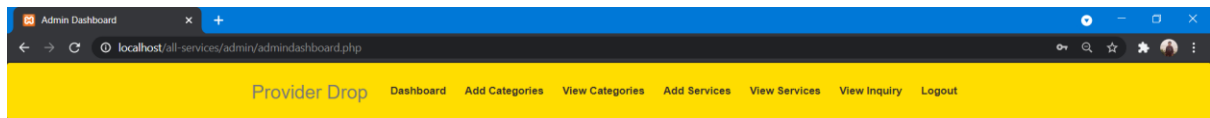

Buyers can directly go to website and search for products in explore service section. He/she can also search according to category. if buyer found something attractive he/she can click on read more to found product details and price and all. If he/she wants to buy product there is form with product buyer needs to fill. At admin side response stored and admin can manually contact buyer to confirm details and product.

At admin side there are add category section, add service section, admin can also edit or delete service/category. there is also section to show inquiries And then logout section.

\*I create this home page in Figma application(you just need to drag drop components and application gives you CSS for same). I also took a friends help for CSS.

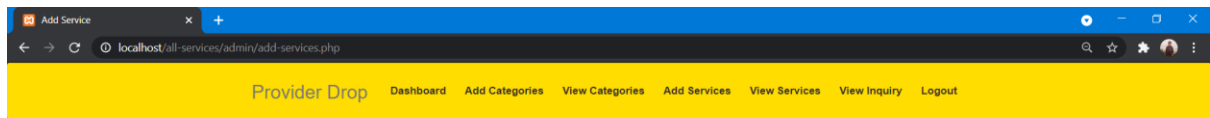

Welcome to Admin Dashboard
